Detect external threats and risks before your organization is attacked

Managed Intelligence Service

With exponentially more frequent cyber incidents happening from more sophisticated threat actors, your company is increasingly exposed to reputational, financial and operational risk. Your growing digital footprint of web, social and mobile channels further compounds the opportunities and likelihood of attacks – just as it limits what's under your direct control.

It is no longer enough to look inside your organization. Now, you need to monitor, detect, and respond to threats before they attack your systems.

For a more secure society

Managed Intelligence Service (MIS) complements and can integrate with your internal threat monitoring program, such as FOX-IT's Cyber Threat Management (CTM) or other Managed Detection and Response (MDR) solutions you might already have in place. Combined, you benefit from proactive cyber vigilance that monitors and mitigates threats from the outside in, protecting your most vital organizational assets from intellectual property to reputation and minimizing financial and productivity losses while assuring business continuity.

EXAMPLE CUSTOMER RESULTS

- Identified hard coded user names and passwords in an executable file shared on the internet.
- Found typo squat domain name being created on anonymity network.
- Located an uploaded document that contained doctor privileged, sensitive information.
- Observed a poorly protected boardroom conferencing system connected to the internet.

FOX-IT

Prevents, solves and mitigates the most serious threats caused by cyberattacks, data leaks or fraud with innovative solutions for governments, defense agencies, law enforcement, critical infrastructure, banking and commercial enterprise clients worldwide. FOX-IT combines smart ideas with advanced technology to create solutions that contribute to a more secure society. We develop products and custom solutions for our clients to guarantee the security of sensitive and critical government systems, protect industrial networks, defend online banking systems and secure confidential data.

The New Vigilance: Making potential threats known to minimize exposure and mitigate risk

Hosted from FOX-IT's Intelligence Operations Centers, highly skilled analysts gather, classify and notify you about the fast-moving, ever-changing threats that can impact the confidentiality, integrity and accessibility of your core assets and business.

Doing this on your own does not only require a high level of expertise, but it is also time-consuming and costly. As a managed service, MIS brings our world-class expertise to you in a highly effective and cost efficient manner.

Digital Risks

- Leaked Passwords: The weakest link.
- Leaked Information: The danger of Intellectual Property (IP) loss.
- Typo Squat Domains and Phishing: Preying on internal trust.
- DDoS Intelligence: Minimize downtime, revenue loss and brand impact.
- Publicly Available Systems: Risks hiding in plain sight.
- Compromised Systems: MIS delivers insights.

Key Benefits

- **Proactive**
Other digital threat monitoring solutions may only provide a long list of potential threats that you need to review. We go further, by assessing those threats, identifying risks and solutions, and then working with you to mitigate those risks and defend against them.
- **Multi-sourced**
Because we serve many clients, we have intelligence about the types of threats targeted to your industry.
- **Accessible**
MIS is integrated with our CTM solution and portal, giving you an integrated view of cyber monitoring activity.
- **Managed Service**
You benefit from FOX-IT's depth and breadth of experience and can be up and running quickly without the need to hire and maintain additional personnel.
- **Comprehensive**
Our complementary security services and solutions and our reputation in the industry provide a complete approach to your cyber security program.
